Duration of CTPR Master Class

2019

Who should attend?

Modules for the Master Class

Managing Spectrum to Maximise Social and Economic Benefits

Explores the socio-economic impact of efficient and effective spectrum management. This will help delegates to gain a holistic view of the value and impact of spectrum on national and regional development and sustainability.

Digital Business and Economics

The digital economy has critical and far reaching implications for nations, businesses and society. This module offers case studies and discussions on how disruptive technologies are reshaping business models and transforming businesses.

Converged Policy and Collaborative Regulations

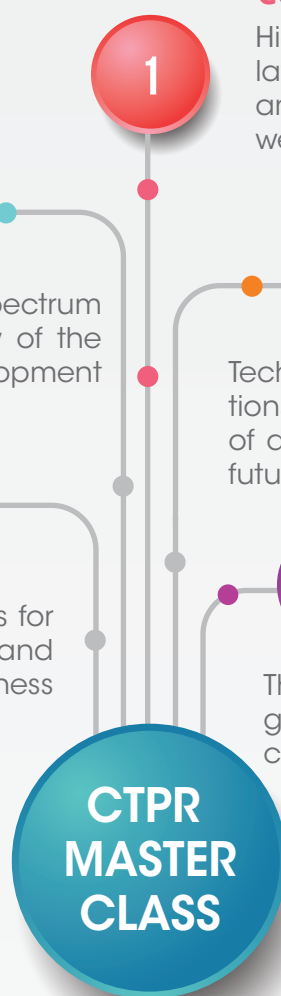

Highlights the principles governing policy formulation, legislation and regulation. Also looks at innovative and collaborative approaches to current and future trends in international telecommunications law and policy, as well as global markets, government and regional regulations.

Emerging Technologies and Networks

Technology convergence is the underpinning layer that supports new directions in digital services. This module looks at the opportunities and challenges of digitisation, current trends in digital services, and presents insights on the future ramifications of technology and networks.

Smart Digital Nation, Cities and Communities

This module looks at a range of pertinent issues including encouraging the growth and development of IoT services, platforms for digital identity, financial inclusion, new directions in digital services and big data analytics.
